PI is Dr. Colin Ellard, Bob Condia collaborator, "Visual perception and aesthetics of urban form," to Insight Grants, Research Grants of Canada, \$392,361 over five years, application pending review.

Condia, Bob, Loschky Lester, and Rooney, Kevin (all co-investigators). *Architectural Perception Using Central and Peripheral Vision*, a \$36,924 grant request to the Hay Fund, for Neuroscience-Architecture Research Program with the Academy of Neuroscience and Architecture. The synopsis of the problem is: "How do we see architecture? What does the process of seeing built environments tell us about the nature of architecture? Specifically, what does central and peripheral vision tell us about the perceptions of architectural facades and interior spaces? *This study provides basic vision research in the area of architectural perception. The goal is to examine the ways that: 1) central and peripheral vision carry differing aesthetic information about architecture into the mind of an observer; and, 2) specific scene categories, such as architecture, can affect the responses for central and peripheral vision. "This pilot study will test which visual stream is more efficient at identifying exterior and interior building conditions. Understanding the relationship between visually processing facades and interior spaces in object recognition and scene gist respectively can provide evidence that there exists a threshold between architecture seen as an object and architecture seen as a space.*

CREATIVE WORK

Professional Practice:

Partner and Design Principal. Condia + Ornelas Architects. Manhattan, Kansas and San Diego, California 1982 to present.
