Existing Water System

The Montjuic axis is lined with a series of fountains that all work together as one coordinated water system leading up to the Magic Fountain and the Plaça d'Espanya. Each feature has its own pumps and reservoirs, but they're programmed to run in sync, creating a continuous visual and hydraulic sequence along the whole axis.

Courtyard Water Experience

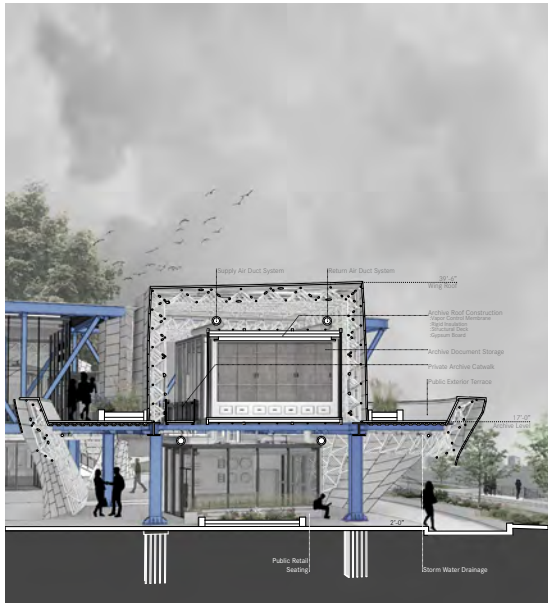

This moment captures a quiet, more private pocket of serenity where the soft rush of falling water becomes a natural backdrop for rest and focus. The stepped seating, warmed by gentle daylight, creates an inviting place to slow down, read, or reflect, while the trees frame the scene with cool shade and the movement of water against the building adds a calming rhythm, an intimate, restorative escape just steps from the surrounding urban activity.

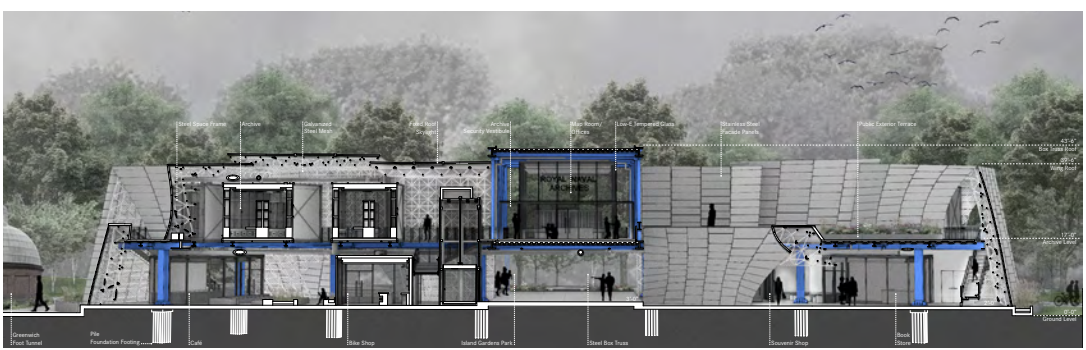

Dining Area Water Experience

A calm, refreshing moment in the courtyard, where the sound of cascading water softens the entire environment and the space opens up as a more public extension of the dining area. The cool mist from the vertical waterfall mixes with the shade of the trees, creating a comfortable, almost meditative place to sit and work, while light filters gently through the leaves and the quiet presence of people adds a subtle sense of life without breaking the tranquility

AUSTIN PHILLIPS

HISTORIC
FULTON MARKET
Fulton Market, once Chicago's meatpacking hub, blends its industrial legacy with modern innovation. Historic warehouses now house tech firms, restaurants, and creative offices, creating a vibrant space where past and future meet. It's a dynamic example of how honoring legacy can inspire progress.

CHAPTER 5: HOUSING GOALS

PROPOSED GOALS, POLICIES, & ACTIONS

GOAL 4: INCREASE THE VARIETY OF HOUSING TYPES

The community of Lyons has spoken to market stagnation of their housing and have expressed through the community engagement sessions held in preparing this document that they want to see a greater variety of housing developed throughout the city.

Currently, there exists state funding to help support this goal, such as Community Development Block Grants (CDBGs) with specific initiatives for Housing Rehabilitation and Demolition, the Historic Economic Asset Lifeline (HEAL) grant for downtown buildings, and the Residential Opportunities on Main Street (ROOMS) program that specifically helps with developing downtown second-floor residential units above existing commercial spaces.

Increasing the variety of housing types that are available to the city will help to ensure there are affordable options for multiple income levels, and this can be better assessed or incentivized through the following actions and policies the city can implement.

POLICY 5.4.1: REVISE DEVELOPMENT STANDARDS TO ENCOURAGE HOUSING CONSTRUCTION AND MAINTENANCE

Encouraging the development of specific housing types and greater densities can be accomplished through a revision of the existing standards for development in Lyons; revisions made by the city administration with the intent to be more encouraging of development rather than restricting, while still requiring a desired standard of maintenance to prevent further dilapidation of housing.

ACTION 5.4.2: CONDUCT A HOUSING MARKET STUDY

A more direct study of the local housing market of Lyons would identify what types of housing are available, which are most possible, and how best the city can meet future housing needs through partnerships with developers and residents.

- **Implementation Strategy:** *This is typically handled by consultant planning firms who then generate a report to guide the city, similar to this document, but specifically for housing and in greater detail.*

Figure 5.28: Typical process of a housing market study. Data Source: City of Manhattan, Kansas.

ACTION 5.4.4: ENCOURAGE ADAPTIVE REUSE OF BUILDINGS FOR HOUSING

Implementation of different development standards, zoning, building, and safety codes would allow for easier adaptive reuse of buildings that are no longer prohibitively expensive.

- **Implementation Strategy:** *CDBGs are commonly utilized for the repair and redevelopment of existing housing and the infrastructure that connects to them, also sourced through the Kansas Department of Commerce.*

Natural Resources

The community of Fayetteville loves being outdoors. “We have fantastic hiking trails, bike trails, natural areas, and we are working to make our water ways more accessible for recreation.” (Bostick, 2024). The City of Fayetteville is also working to create an extensive trail network that makes “great use of our weather to let people make the most of the outdoors.” (Bostick, 2024). The community often uses the parks and trails, with many events happening at these locations. The city puts on a very popular summer park concert series called the Gulley Park Summer Concert Series. This is a “long-standing tradition of outdoor live music with a food truck rally on six different occasions each summer.” (Fayetteville, 2024). The concert series is a fantastic use of the park in Fayetteville and helps to keep the community involved and happy.

Another event that is put on by the city is the Celebration of Trees where the city provides a free tree each year to community members. It is done as a drive-thru with different plant species to choose from, with native plants and plants that are þptimal for the climate of Fayetteville. “Properly located trees around the home can add property value, reduce utility bills, and protect skin from the sun's UV rays.” (Fayetteville, 2024). Having this information on the website increases people’s want for these trees and encourages citizens to help the community by planting trees and adding to their urban forestry. It’s wonderful to see that the City of Fayetteville cares for its residents by caring about their mental and physical well-being.
